

# Opacilite™

Durable titanium dioxide extender for high quality matt paints

THE APPLICATION OF MINERAL SCIENCE

**Opacilite™** is the ideal titanium dioxide extender and opacifier for high quality matt paints.

Providing durability and exceptional opacity both above and below the CPVC of a coating, **Opacilite™** is the first choice for TiO<sub>2</sub> extension in high quality matt and silk paints.

## **Opacilite™**

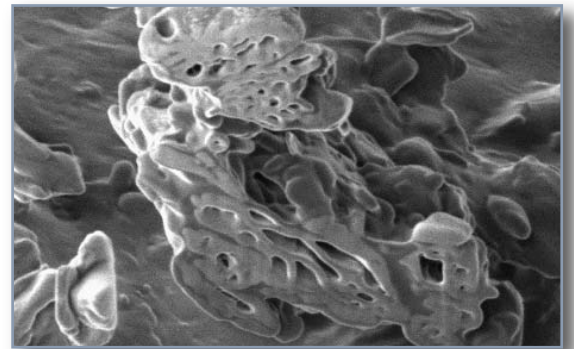

- TITANIUM DIOXIDE EXTENSION
- EXCELLENT WET OPACITY
- OUTSTANDING DRY HIDING
- DURABLE
- EFFECTIVE ABOVE AND BELOW COATING CPVC
- FOR USE IN HIGH QUALITY MATT AND SILK PAINTS

# Opacilite™

is a naturally-sourced mineral product allowing significant cost savings

The intrinsically sealed voids of the aggregated structure are optimised for maximum light scattering and give **Opacilite™** its characteristic properties. Sealed rather than open voids result in better wet opacity, and allow dry hiding to occur even below the CPVC of the coating.

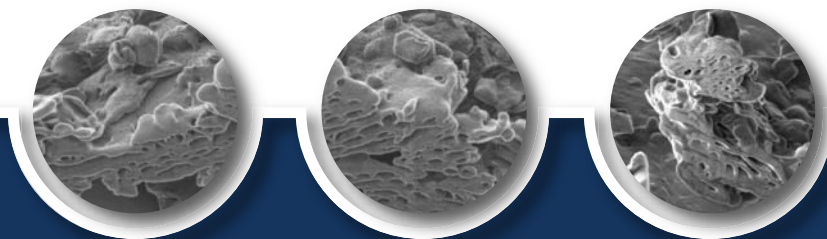

The high durability of **Opacilite™** makes it particularly suitable for use in high quality paints.

## PHYSICAL CHARACTERISTICS

Grade	Brightness (ISO)	+10 microns (%)	- 2 microns (%)	Mean Particle Size (d <sub>50</sub> μm)	Oil Absorption (g/100g)	Hegmann Value (μm)
Opacilite™	87	5	56	1.6	74	<35
